

BABY WOLF CODES

HTML Knick Knacks.

Spellcheck.

The **spellcheck** attribute can be used on editable elements to indicate the browser that spell checking can be performed

```
<input spellcheck="true" />
```

A text input field with a black border containing the text "Helloooo asdf". The word "Helloooo" is underlined with a red wavy line, indicating a spelling correction suggestion.

Capture.

The **capture** attribute hints the browser that for a file input, we allow user to provide image/audio directly from the camera/microphone

```
<input type="file" capture="user"
      accept="image/*" />
```

Content editable.

The **contenteditable** attribute allows the user to edit any element, including paragraphs, **divs** and so on

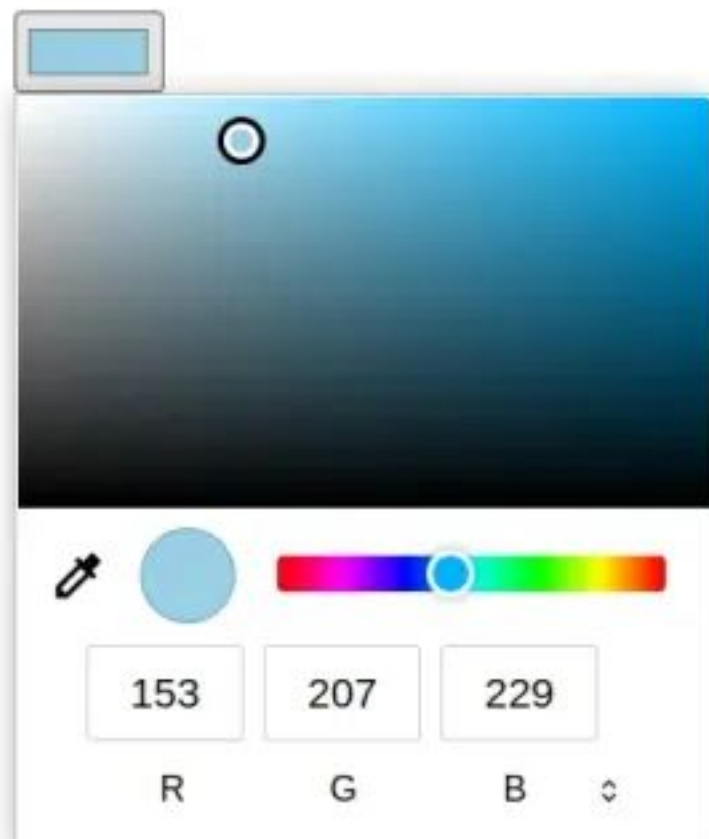

```
<p contenteditable>Hello</p>
```

Color input.

input type **color** displays a color picker widget

```
<input type="color" />
```

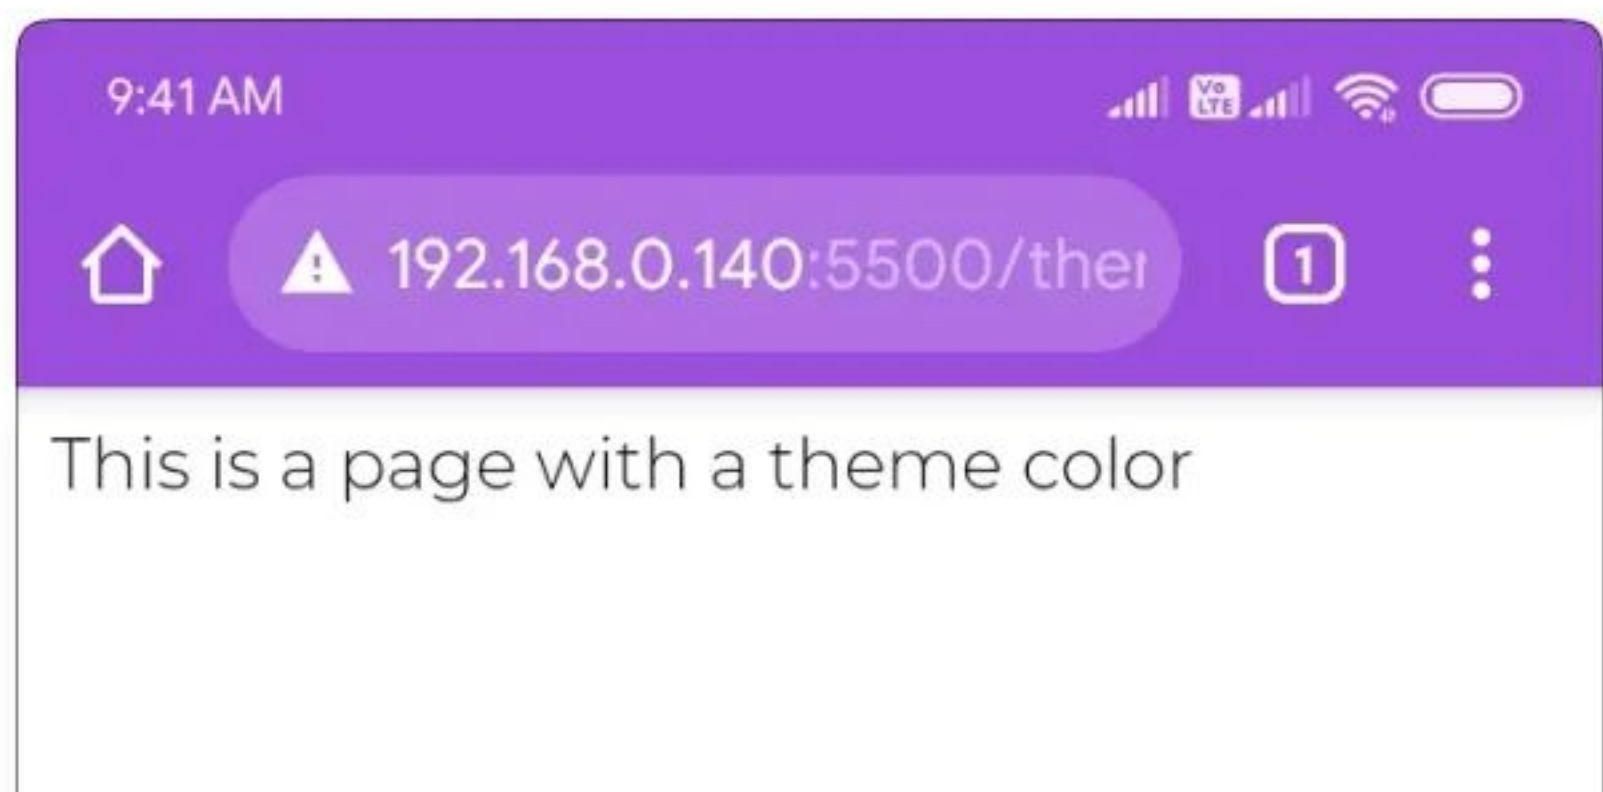

Theme color.

theme-color meta element can be used to style the tab color in mobile browsers

```
<head>
  <meta name="theme-color"
        content="#4285f4" />
</head>
```

Option group.

`<optgroup>` element can be used to group options inside a `<select>` element

```
<select>
  <optgroup label="Group 1">
    <option>Lorem.</option>
    <option>Accusantium?</option>
  </optgroup>
  <optgroup label="Group 2">
    <option>Adipisci.</option>
```
